

METAL DECORATION

Engineered for metal.

Ready for what's next.

UV Inks | Dispersions | Contract manufacturing

It's time to go digital

From food-compliant ink technology to flexible formulations, high-performance resistance and digital embellishment, Fujifilm Ink has market-ready solutions for the realities of metal decoration.

Ink engineered for the demands of metal

Fujifilm Ink brings the chemistry, compliance and application expertise to help you achieve consistent performance, and push what's possible with digital metal decoration.

Whether you're looking to improve draw performance, meet demanding food packaging requirements, withstand pasteurisation, retort or sterilisation, or unlock new opportunities through digital embellishment, our specialist metal decoration UV ink solutions are engineered around your application drivers.

Partnering with Fujifilm means:

Reliable, consistent, high-quality products

Ink and dispersions delivered with Fujifilm standards, specification every time.

Long-term inkjet partner

Backed by robust infrastructure, and investment in our operations for future security.

Regulatory confidence

Keeping you in pace with regulation to ensure continued compliance.

Metal packaging beyond CMYK with digital varnish and embellishment

Fujifilm Ink brings the chemistry, compliance and application expertise to help you achieve consistent performance, and push what's possible with digital metal decoration.

Differentiate. Embellish. Create something impossible to ignore.

Compliance without compromise

Confidence built into every formulation.

Our metal decoration ink portfolio has been developed with the stringent requirements of food packaging in mind, including indirect food contact applications, Swiss Ordinance, Nestlé and GMP compliance requirements.

With compliance considerations built into formulation development, we help you navigate increasingly complex and evolving regulatory and customer requirements, without compromising on print performance.

Ink expertise across leading metal decoration platforms

No two production environments are identical.

That's why Fujifilm Ink offers a range of formulations developed for a number of leading metal decoration machine manufacturers, giving OEMs, converters and metal decorators greater flexibility when specifying an ink solution.

Whether you're developing new digital hardware, optimising an existing production line or looking for an alternative ink technology, our team can work with you to identify the right chemistry for your process.

Have a metal decoration challenge?

Let's find the solution, together.

Perhaps you've experienced adhesion, draw, curing, flexibility, migration or downstream resistance challenges or perhaps you have fears around costs associated with a fully digital line.

Or perhaps you're looking at what comes next for your business; digital decoration, premium embellishment, shorter runs, new substrates or new applications.
